New messenger – ring binding with info function

The EcoBirder is a new binding machine for products with paper binding. It is a new ecological binding machine for products with paper binding.

Up to now, calendars and writing pads were bound with metal or plastic spiral wires. But the mixture of paper and metal in these traditional binding makes it necessary to separate the binding prior to recycling, which costs money. Metal bindings also involve the risk of injury, especially if the pad is used as a writing pad.

Things have changed with the EcoBirder. The new writing pads consist of 100% paper, which is easy to recycle. The new binding machine produces a new type of binding.

Individual products can be produced in small quantities. In production, the machine is used to produce the binding. The paper binding is produced by the machine. The paper binding is produced by the machine.

As in the case of the EcoBirder, the new binding machine produces a new type of binding. The new binding machine produces a new type of binding. The new binding machine produces a new type of binding.

distinguishes it from metal and plastic bindings. So it is not just environmentally friendly and promotionally effective; it also offers document quality.

Market of The EcoBirder is a new binding machine for products with paper binding. It is a new ecological binding machine for products with paper binding. The new binding machine produces a new type of binding.

Neue Blocknote- und Kalkulierblock-Designs dank der flexiblen Papierbindung.
